EXPERIENCE

Software Engineer Intern

AskMeIdentity

Dec 2025 - May 2026

Bengaluru

- Designed and implemented the UI and UX for the LMX platform, delivering 10+ production screens and defining user flows from wireframes to deployed features. - Led the redesign of 4+ core modules across the application suite, standardizing layout patterns and improving visual consistency across products. - Built a cross platform desktop application using Electron, implementing 3 major feature flows including authentication, content access, and update handling.

Research Intern

Samsung R&D Institute India - Bangalore

Mar 2025 - Feb 2026

Chennai

- Working as a Technical researcher with team of 4 for Developing AI solutions, focusing on innovative approaches and optimizing solutions - Collaborating on industry-level as Research Intern in the Samsung PRISM program

Software Engineer Intern

EmendoAI

Oct 2025 - Dec 2025

San Francisco Bay Area

- Collaborated with design and backend teams to deliver updates faster and maintain production quality during UI and logic changes. - Authored comprehensive technical documentation for testing workflows and architecture components, improving onboarding speed for new contributors by 30%. - Fixed 50+ bugs, including navigation regressions and data overflow issues, directly improving platform stability and preventing user-facing crashes.

Frontend Developer Intern

SRM Innovation and Incubation Centre

Jan 2025 - Jul 2025

Chennai, Tamil Nadu, India

- Rebuilt 60+ pages from scratch to create a faster, more modern, user-friendly and responsive website with smooth animations for 3+ sites. - Achieved 25% increase in user engagement and a 10% reduction in bounce rate through optimizations in performance, accessibility, and SEO. - Coordinated and maintained version control workflows, ensuring smooth collaboration and code integration across updates.

PROJECTS

lavalamp | Agentic AI, Typescript, Workers AI, Flue

- An open-source Cloudflare-native coding agent harness enabling AI-assisted software development directly from the terminal.
- Designed core infrastructure including semantic code indexing, a hash-anchored file editing engine improving edit reliability by 42%, resumable agent sessions, and approval-based command execution.
- Architected an extensible multi-agent framework with expert subagents and Cloudflare Workers AI integration, providing secure, local-first AI development workflows.

agent-orchestrator | Typescript, Node.js, Redis

- Built a recursive orchestration engine supporting multi-stage task pipelines with dynamic agent spawning.
- Designed execution system enabling N-level task delegation across dependent workflows
- Implemented asynchronous execution handling multiple concurrent task flows (20+ agents) with state propagation and state persistence using Redis
- Generates a dependency graph with the agents and follows a master-delegator model in a form of layers in recursive way to complete the goal

bullet | Typescript, Nuclei, BBOT, SQLi

- Built an agentic AI security platform that reasons over 7+ web application surfaces, generates attack hypotheses, prioritizes high-signal leads, and autonomously executes multi-step tool-calling workflows.
- Engineered a 25+ phase reconnaissance and vulnerability-validation pipeline covering authentication, SQL injection, XSS, SSRF, business logic, API discovery, and JavaScript analysis.
- Integrated knowledge-graph reasoning to correlate endpoints, exposed secrets, authentication context, findings, and attack chains into structured security reports.

EDUCATION

SRM Institute of Science and Technology

BTech Computer Science Engineering with AIML

Expected 2027

CGPA: 9.41

SKILLS

Languages	Python, Typescript, Javascript, Go
Frameworks	Pytorch, YOLO, LangGraph, AI SDK, FastAPI, Next.js, ReactJS, Express, Hono, Fiber
Others	OpenAI, HuggingFace, Supabase, PostgreSQL, Git
