EXPERIENCE

Software Engineer Intern Dec 2025 - May 2026
AskMeIdentity *Bengaluru*

- Designed and implemented the UI and UX for the LMX platform, delivering 10+ production screens and defining user flows from wireframes to deployed features. - Led the redesign of 4+ core modules across the application suite, standardizing layout patterns and improving visual consistency across products. - Built a cross platform desktop application using Electron, implementing 3 major feature flows including authentication, content access, and update handling.

Research Intern Mar 2025 - Feb 2026
Samsung R&D Institute India - Bangalore *Chennai*

- Working as a Technical researcher with team of 4 for Developing AI solutions, focusing on innovative approaches and optimizing solutions - Collaborating on industry-level as Research Intern in the Samsung PRISM program

Software Engineer Intern Oct 2025 - Dec 2025
EmendoAI *San Francisco Bay Area*

- Collaborated with design and backend teams to deliver updates faster and maintain production quality during UI and logic changes. - Authored comprehensive technical documentation for testing workflows and architecture components, improving onboarding speed for new contributors by 30%. - Fixed 50+ bugs, including navigation regressions and data overflow issues, directly improving platform stability and preventing user-facing crashes.

Frontend Developer Intern Jan 2025 - Jul 2025
SRM Innovation and Incubation Centre *Chennai, Tamil Nadu, India*

- Rebuilt 60+ pages from scratch to create a faster, more modern, user-friendly and responsive website with smooth animations for 3+ sites. - Achieved 25% increase in user engagement and a 10% reduction in bounce rate through optimizations in performance, accessibility, and SEO. - Coordinated and maintained version control workflows, ensuring smooth collaboration and code integration across updates.

PROJECTS

lavalamp | **Agentic AI, Typescript, Workers AI, Flue**

- An open-source Cloudflare-native coding agent harness enabling AI-assisted software development directly from the terminal.
- Designed core infrastructure including semantic code indexing, a hash-anchored file editing engine improving edit reliability by 42%, resumable agent sessions, and approval-based command execution.
- Architected an extensible multi-agent framework with expert subagents and Cloudflare Workers AI integration, providing secure, local-first AI development workflows.

bullet | **Typescript, Nuclei, BBOT, SQLi**

- Built an agentic AI security platform that reasons over 7+ web application surfaces, generates attack hypotheses, prioritizes high-signal leads, and autonomously executes multi-step tool-calling workflows.
- Engineered a 25+ phase reconnaissance and vulnerability-validation pipeline covering authentication, SQL injection, XSS, SSRF, business logic, API discovery, and JavaScript analysis.
- Integrated knowledge-graph reasoning to correlate endpoints, exposed secrets, authentication context, findings, and attack chains into structured security reports.

agent-orchestrator | **Typescript, Node.js, Redis**

- Built a recursive orchestration engine supporting multi-stage task pipelines with dynamic agent spawning.
- Designed execution system enabling N-level task delegation across dependent workflows
- Implemented asynchronous execution handling multiple concurrent task flows (20+ agents) with state propagation and state persistence using Redis
- Generates a dependency graph with the agents and follows a master-delegator model in a form of layers in recursive way to complete the goal

EDUCATION

SRM Institute of Science and Technology Expected 2027
BTech Computer Science Engineering with AIML *CGPA: 9.41*

SKILLS

Languages	Python, Typescript, Javascript, Go
Frameworks	Pytorch, YOLO, LangGraph, AI SDK, FastAPI, Next.js, ReactJS, Express, Hono, Fiber
Others	OpenAI, HuggingFace, Supabase, PostgreSQL, Git
